

By the Numbers

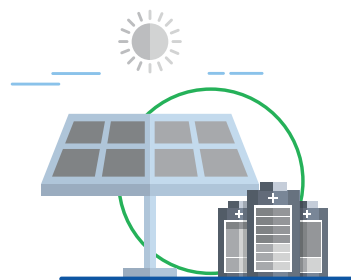

UniSource 2026 Integrated Resource Plan

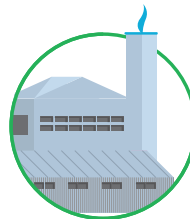

Reliability

701MW

New generation
and storage capacity

190MW Solar
190MW Storage

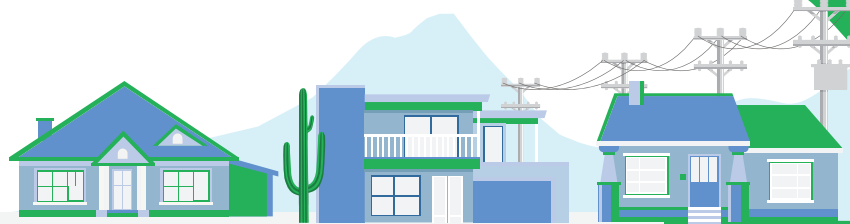

321MW Natural Gas

18%

Planning Reserve Margin

Supports resource adequacy.

Affordability

\$25M–\$140M

Projected customer
savings compared
to other scenarios

\$40M–\$225M

Less capital investment
vs. alternatives

All Source Request for
Proposals are issued for
new resources and bids are
evaluated according to cost
as well as other criteria.

Sustainability

- More than doubles UniSource-owned generating capability, reducing reliance on market purchases

Renewable generation and
storage reduce the need for
additional conventional
generation.

2026 IRP introduces the first
utility-scale battery energy
storage system for UniSource
